ASCENT *PROTECT*

Software Maintenance Agreement

DOES YOUR SOFTWARE CONTINUE TO MEET RECOMMENDED STANDARDS AS THEY CHANGE?
DO YOU KNOW HOW MUCH YOU WILL PAY WHEN IT'S TIME TO UPGRADE?

With the MGC Diagnostics yearly **Ascent Protect Software Maintenance Agreement** for Ascent Cardiorespiratory Diagnostics software, you will be able to make sure your software package is up to date with the latest enhancements and ATS/ERS standards. This plan reflects the increased value MGC Diagnostics has presented to our customers over the past 40+ years by delivering innovation to adjust to your diagnostic testing needs. With the software maintenance agreement, you know what your software operating costs will be, rather than an unexpected upgrade charge of \$10-20K per workstation from other vendors.

ATS/ERS guidelines and standards are forever changing. Microsoft® continues to update their Windows Operating System. New features and enhancements are continually added to our software. Do not be left behind with outdated software or software that does not reflect today's standards. Protect your investment with the software maintenance agreement plan to ensure you have the best and up to date software for your diagnostic testing equipment.

WITH THE SOFTWARE MAINTENANCE AGREEMENT, YOU GET:

- Notification whenever a new version of software is released
- Easy and secure access to the latest software version
- Newest standards from ATS/ERS are automatically included
- Enhancements to the base software platform
- Enhancements to the software options that were purchased

Be assured that without the software maintenance agreement your current Ascent software will continue to operate. MGC Diagnostics will continue to support your software platform by eliminating software errors (“bug fixes”) on the software platform you currently have, without the advantage of those items listed above.

Monthly or yearly software agreements are the norm today, from Windows Office 365 to Adobe Acrobat Pro. This is designed so you have the most powerful features and secure software available. By investing in your software package, you are ensuring you have the most advanced features available to fulfill your testing needs.
