Workflow Solutions

Data Collection, Data Review and Data Management

Workflow

Finding more efficient ways to support patient needs begins with better workflow management. MGC Diagnostics has developed a complete workflow system which combines healthcare industry standards and best practices with flexibility and support. MGC Diagnostics makes it easy to build and customize powerful workflow solutions to save time and effort – allowing the focus to be on the patient. MGC Diagnostics flexible workflow solutions are separated into 3 categories: Data Collection, Data Review and Data Management.

Data Collection

[BreezeSuite™ Cardiorespiratory Diagnostic Software]

The heart of MGC Diagnostics' workflow solutions package is BreezeSuite cardiorespiratory diagnostic software. This versatile software combines gas exchange and pulmonary function testing into one powerful application that sets a new standard for ease of use. The easy-to-use cardiorespiratory diagnostic software contains extensive options for predicted sets, customizable displays and reports, and integrated software options. BreezeSuite cardiorespiratory diagnostic software provides several technological advantages:

- Works on any computer meeting Microsoft Windows® operating system requirements.
- Ompatible with commercial off-the-shelf (COTS) anti-virus and anti-malware software.
- O Works over customer's network domain.
- No Administrator or power user rights needed for daily use.
- Full-Disk Encryption support.

Data Beview

[BreezeReview™ Physician Review Software]

BreezeReview physician review software combines workstations with review stations. All workstations and review stations share the same database. A physician can review, interpret, change review status, and electronically sign results as the workflow dictates. Results can be posted through BreezeConnect HL7 interface software to the EMR system. BreezeReview physician review software can be installed on a server for easy access through multiple technologies such as Citrix, RDS and VDI deployments (BreezeReview™ physician review server licensing required).

[BreezeSuite MultiUser™ Networking Software]

BreezeSuite MultiUser networking software connects cardiorespiratory diagnostic systems and review stations so data can be shared and stored in a central Microsoft SQL Server® database. This networking software allows all workstations to share one database from either a local area network (LAN) or a wide area network (WAN). Reports, reference values, and statements can be standardized from each site. With an enterprise friendly approach, IT/IS departments can use their approved hardware without separate vendor hardware. BreezeSuite MultiUser networking software provides the following benefits:

- All diagnostic workstations, review stations and HL7 interface software connect to one database.
- All systems and review stations use the same software and software version.
- O Diagnostic test results are immediately available for physician review.
- Use of Microsoft SQL Server for database management with no dedicated server requirement.
- Automated data backup reduces the risk of data loss and expense of retesting.
- Virtual Server Support.
- SQL Server Clustering Support
- ePHI is stored in customer's Data Center with no data stored at rest.

[BreezeConnect™ HL7 Interface Software]

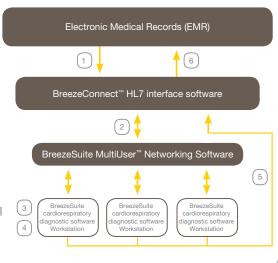

BreezeConnect HL7 interface software allows any number of networked systems to send and receive data from the facility's electronic medical records (EMR) system. The interface software is compatible with most commercial and facility-developed hospital information systems (HIS), allowing access to patient information from any location tied to the facility's EMR system.

HERE'S HOW IT WORKS:

Physician orders and patient demographics are received on a workstation. After the test is completed and interpreted, the test data, PDF report, text report or a combination of these is sent to the EMR system. BreezeConnect HL7 interface software also provides the following advantages:

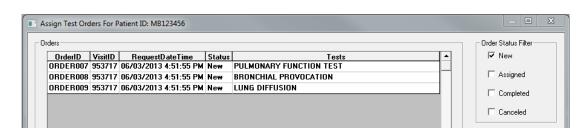

- · Automatic data transfer and entry is time-efficient and reduces the unnecessary expense of errors and misplaced test retrieval.
- Eliminates the need to configure or customize programming to convert HL7 data.
- · Patient identification numbers, demographics and physician orders (ORM) can be downloaded to the MGC Diagnostics BreezeSuite cardiorespiratory diagnostic software database. Patient test results (ORU) and interpreted reports can be uploaded to the EMR system.
- Utilizes the HL7 2.x standard as well as TCP/IP and MLLP (minimal lower layer protocol) for data transfer.

- 1. Physician Orders are sent from the EMR to the BreezeConnect HI 7 interface software.
- 2. The Physician Orders are sent from the BreezeConnect HL7 interface software to BreezeSuite MultiUser SQL database.
- 3. The appropriate fields in BreezeSuite cardiorespiratory diagnostic software are populated with Patient Demographics and Orders.
- 4. Operator performs requested patient tests.
- 5. The preliminary and/or final test result is released by the operator or physician.
- 6. Results are converted to HL7 and sent to Electronic Medical Records (EMR). Additionally, reports containing graphics may be sent via PDF file in the HL7 message to the EMR.

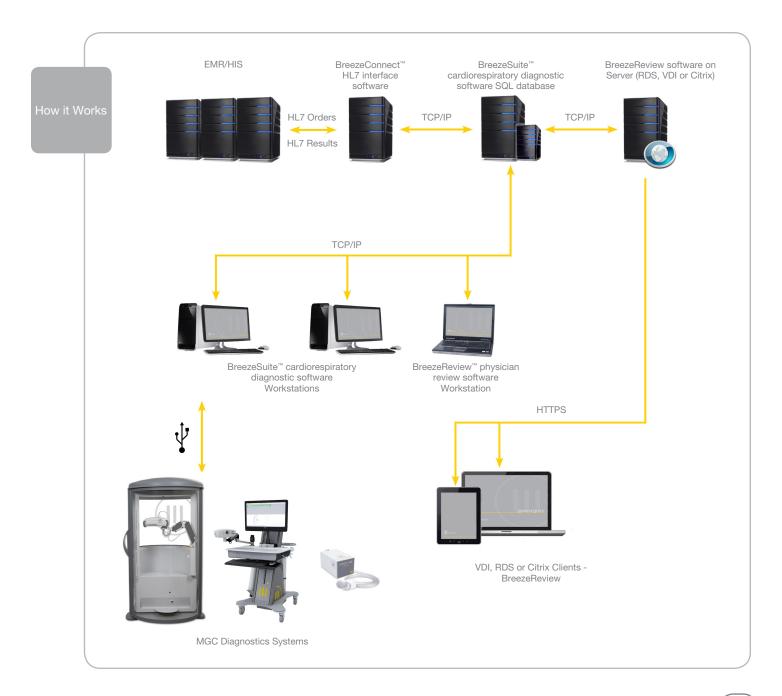

Electronic Physican Order Entry

BreezeSuite™ cardiorespiratory diagnostic software displays patient tests ordered by the clinician.

Application

Rapid Access to Patient Data

"We want to bring a patient into any testing room and pull up their historical test results or view spirometry data from the Pulmonary Lab when the patient arrives for a test in Cardiology."

BreezeSuite MultiUser™ networking software Install networking software on MGC Diagnostics' systems and connect to a centralized database located on a server. Patient data can now be retrieved and viewed on any testing system or department workstation connected to the network without interrupting workflow.

Faster Turnaround of Reviews and Interpretations "Our doctors want to review, interpret and save test data from their office or home."

BreezeSuite MultiUser networking software BreezeReview physician review software

Create a BreezeSuite MultiUser diagnostic system network and add BreezeReview physician review software to computers on the network. Physicians can now retrieve, interpret and trend patient results in their office, eliminating the need to manage paper reports. This accelerates completion of interpretations and makes the diagnosis available for rapid clinical follow up.

Wider Availability to Patient Test Results "We want to get our final reports into the EMR so they can be viewed from anywhere in the hospital."

BreezeSuite MultiUser networking software with BreezeConnect HL7 interface software Using the BreezeConnect HL7 interface software, patient results can be sent from the BreezeSuite MultiUser network to the EMR for viewing on any EMR workstation.

Enhanced Workflow and Reduced Errors "We need to reduce entry errors and add the efficiency of entering new patient demographics by accessing the information electronically."

BreezeSuite MultiUser networking software with BreezeConnect HL7 interface software

With BreezeConnect HL7 interface software, patient demographic records and physician orders can be sent to the BreezeSuite MultiUser central database for access at the diagnostic workstation.

Specifications

[HL7 INTERFACE APPLICATION SERVER SPECIFICATION (IM v8.17)]

Operating System	Windows Server 2012 (R2) (64-bit)
	Windows Server 2016
	Windows Server 2019
Processor	Dual Core minimum, Quad Core recommended if over 1K messages/day
Hard Disk	250+ GB recommended
Hard Disk Speed	7200 RPM or higher
Memory	8+ GB recommended
EMR/HIS Connectivity	 Real-Time Interface: Client/Server connectivity via TCP/IP MLLP or file exchange
Virtual Machine Support	• Yes

Specifications (continued)

[DATABASE SERVER SPECIFICATION (BreezeSuite Software v8.6 or Higher)]

Operating System	 Windows Server 2012/2012 (R2)
	 Windows Server 2016
	Windows Server 2019
Processor	2.0 GHz or faster recommended
Hard Disk	• 250+ GB recommended
Memory	16+ GB recommended
Network	TCP/IP networking installed
	O DHCP or static IP Address
Virtual Machine Support	• Yes
64-bit OS Support	• Yes
SQL Server Versions Supported	 SQL Server 2012 (Standard or Enterprise edition)
	 SQL Server 2014 (Standard or Enterprise edition)
	 SQL Server 2016 (Standard or Enterprise edition)
	 SQL Server 2017 (Standard or Enterprise edition)
SQL Server Configuration	SQL Server is installed with SQL or Mixed Mode Authentication
	 TCP/IP protocol enabled on Server Service and Native Client Service
	Named Pipes protocol enabled on Server Service and Native Client Service

[WORKSTATION SPECIFICATION (BreezeSuite Software v8.6 or Higher)]

Operating System	Windows 10 (Pro or Enterprise or LTSB)
Processor	O Dual Core or greater recommended
Hard Disk	80+ GB recommended
Memory	4+ GB recommended
Windows Display Properties	o 1024 x 768 minimum resolution
Other Hardware	3+ USB ports (if connecting to diagnostic device)
Network	TCP/IP networking installed
	O DHCP or static IP Address
System Type	o x64 (64-bit) PC hardware and operating systems are supported
	NOTE: Ultima [™] CardiO ₂ ® X-Scribe 3.x systems DO NOT support x64 (64-bit) or Windows 10 operating systems.

[CITRIX SERVER SPECIFICATION (BreezeSuite Software v8.6 or Higher)]

Operating System	Windows Server 2012/2012 (R2)
	 Windows Server 2016
	O Windows Server 2019
Processor	2.0 GHz or faster recommended
Hard Disk	• 40+ GB recommended
Memory	4 GB minimum
	• 8+ GB recommended
Windows Display Properties	o 1024 x 768 minimum resolution
Network	TCP/IP networking installed
	O DHCP or static IP Address
Virtual Machine Support	• Yes
64-bit OS Support	• Yes
Virtual Machine Support	• Yes

[PERFORMANCE SPECIFICATIONS FOR CITRIX SERVER]

BreezeReview Process CPU Usage	Minimum - 1.5 MHzAverage - 450 MHzMaximum - 3500 MHz
BreezeReview Process Memory Usage	Minimum - 75 KbAverage - 140 KbMaximum - 600 Kb
BreezeReview Process Disk I/O	Average - 50 B/sec ReadMaximum - 500 B/sec Read
Hard Disk Speed	• 7200 RPM
