

torqualizer® 600ef med

torqualizer 600ef med

In addition to the treadmill, the bicycle ergometer is a classic machine in cardio training and another ideal test- and training device for the professional user. Independent from power supply (no power cable!) the unit can be assured even with most of the various options, which guarantees flexibility and saves money. The optional length adjustable crank arm is an extremely important feature for all users with limitations in the range of motion.

Functions & Features

- easy to handle, multicolor, backlit display with Bio-Feedback
- easy step through
- horizontally and vertically adjustable saddle
- coded Polar® pulse receiver
- RS232 interface
